

## PRESS RELEASE

### **GFT inboxx receives SAP Certification for product portfolio**

#### *SAP Netweaver status provides inboxx customers with complete approach to unified archiving*

**Hamburg – September 4th, 2008** – GFT inboxx, the unified archiving specialist, has announced that inboxx hyparchiv and inboxx erp has achieved SAP NetWeaver status. The certification confirms the compatibility of inboxx's products with SAP and verifies its ability to archive SAP data and documents – a critical tool for all SAP customers looking for a complete and seamless approach to archive documents and data from their ERP systems.

inboxx erp is the SAP-certified, all-in-one solution for archiving data and documents from ERP systems. As an R/3 archiving system, inboxx erp considerably simplifies the electronic management of documents by connecting ERP systems to the powerful inboxx hyparchiv unified archiving backbone. This means that documents, such as orders or invoices, no longer need to be printed out, stapled and filed, as they are automatically classified and placed in the relevant employee's integrated SAP inbox. Essentially the SAP messaging control system ensures automatic storage in inboxx erp.

“By achieving SAP certification we can provide our customers with the assurance that our robust archiving platform will continue to effectively support their SAP solutions,” said Juergen Obermann, CEO of GFT inboxx. “We have essentially opened the door to SAP users to take advantage of our next generation, unified archiving vision, allowing all archiving needs – from SAP data and documents, to emails, instant messages, voice and data files – to be realised through one platform.”

To achieve certification from SAP, GFT inboxx excelled in the standard SAP AL-LOAD performance test. With more than 402,000 documents able to be archived within 1 hour on a single server, GFT inboxx has one of the fastest archives for SAP data on the market today based on a Windows system.

#### **About GFT inboxx**

As the leading European provider of solutions for e-mail archiving, GFT inboxx GmbH combines extensive experience in the field of archiving with detailed knowledge of legal and compliance requirements.
